

**Testing Scenario**

**Goal: To help you create a scenario that enables you to get authentic feedback on a prototype**

**Considerations:**

What makes your user group unique?

Which variable(s) do you want to test?

What does the extreme user look like?

**Site Creation:**

Who needs to be there?

What does the space need to be like?

Time of day/ specific weather needed for effective testing?

Length of time for testing?

**Feedback/recording findings:**

How will you solicit feedback?

How will you record feedback?

How will you record results?

Where will your data live?

**Test:**

How will you run the test?

What materials will you need?

Who needs to be there (from your team/experts/etc.?)

Other logistics to think about?

**Share findings:**

How well did your test work?

What feedback do you get?

How will you move forward?

What advice would you give?
